NEW FEATURE PROPOSAL: FIELD WORKER MANAGEMENT MODULE

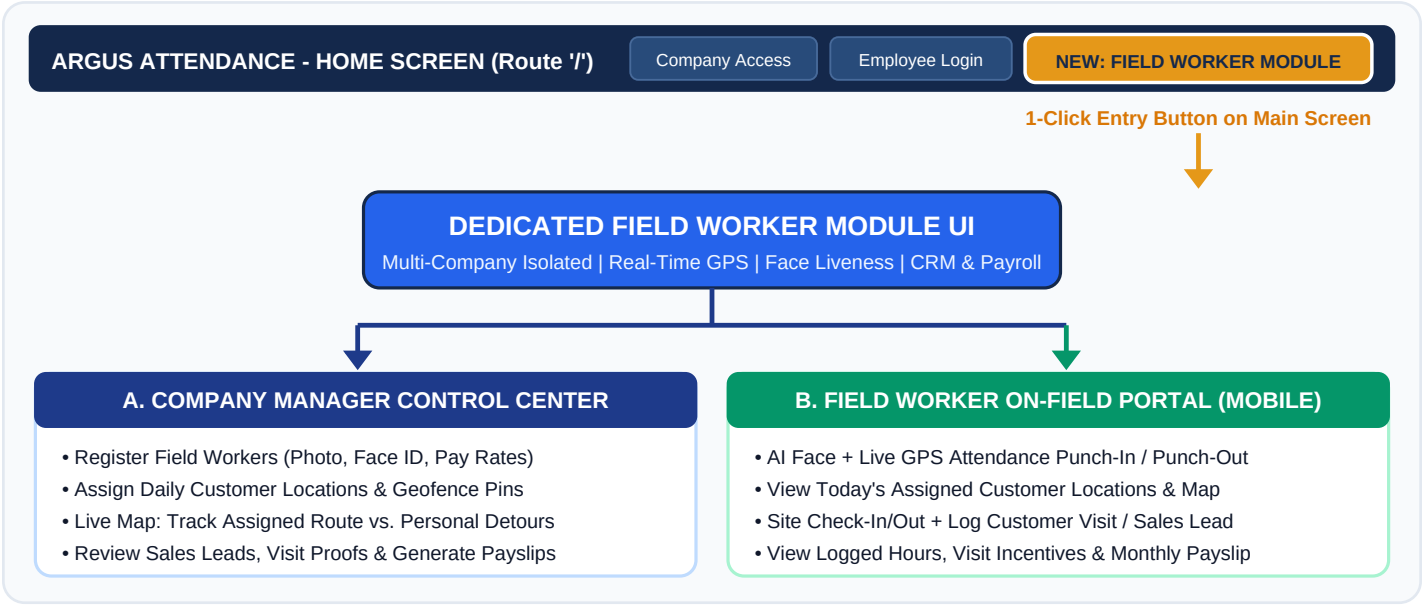
Visual Workflow & Business Guide for Client Approval | Prepared: October 2026

1. Business Overview: Why the Field Worker Module?

Field workers (such as sales executives, marketing staff, service technicians, and delivery representatives) spend their working hours outside the office visiting customers and promoting company products. Unlike office staff, companies need a simple, trustworthy way to **register field staff**, **assign them specific customer locations to visit**, **verify whether they actually visited the assigned customer place or went for personal work**, **record their attendance with Face + GPS**, **log customer enquiries/leads**, and **automatically generate their field salary payslips and performance reports**.

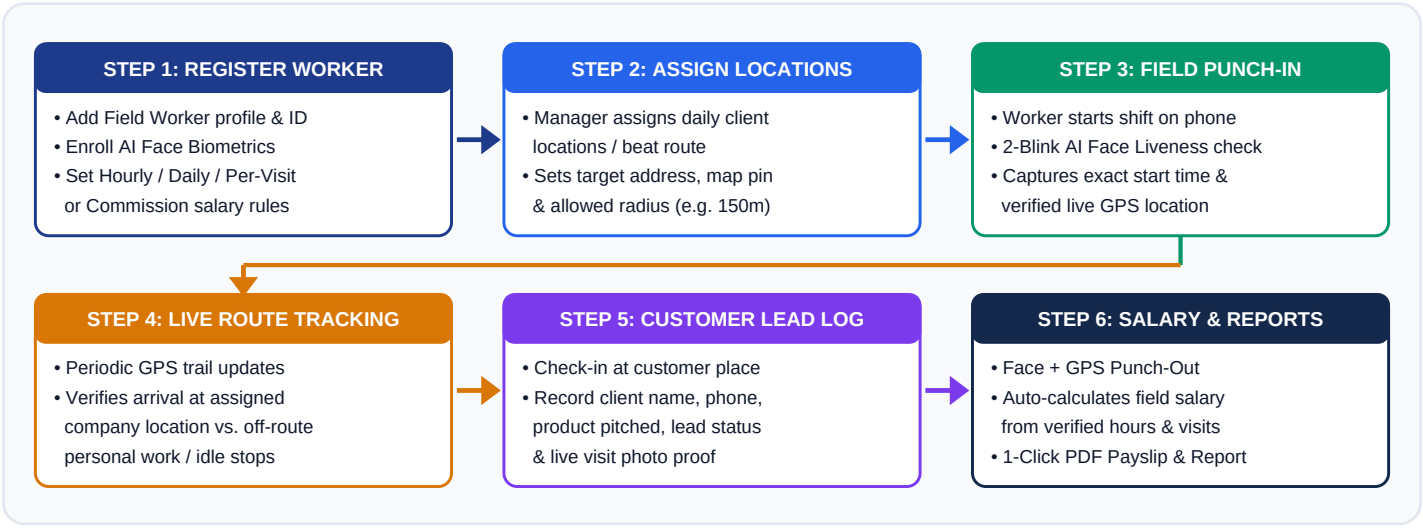
2. How Users Open the Module (New Button on Home Screen '/')

On the main application home screen (**'/'**), a prominent new button titled **"FIELD WORKER MODULE"** is added. Clicking this button opens a dedicated Field Worker interface with two tailored views: one for the **Company Admin/Manager** to assign locations and monitor workers live, and one for the **Field Worker (Mobile View)** to punch attendance, navigate to assigned locations, and log customer visits.



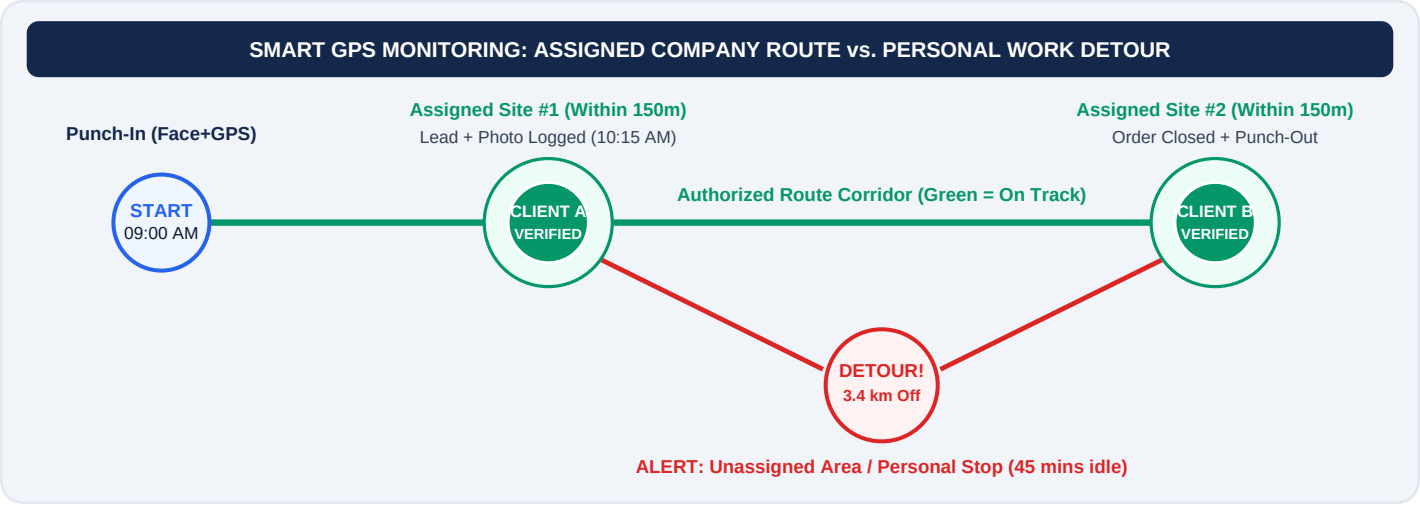
3. Complete 6-Step Visual Workflow (From Registration to Payslip)

The diagram below illustrates how a company manages its field workforce from start to finish every day:



4. How We Detect Assigned Company Visits vs. Personal Work Detours

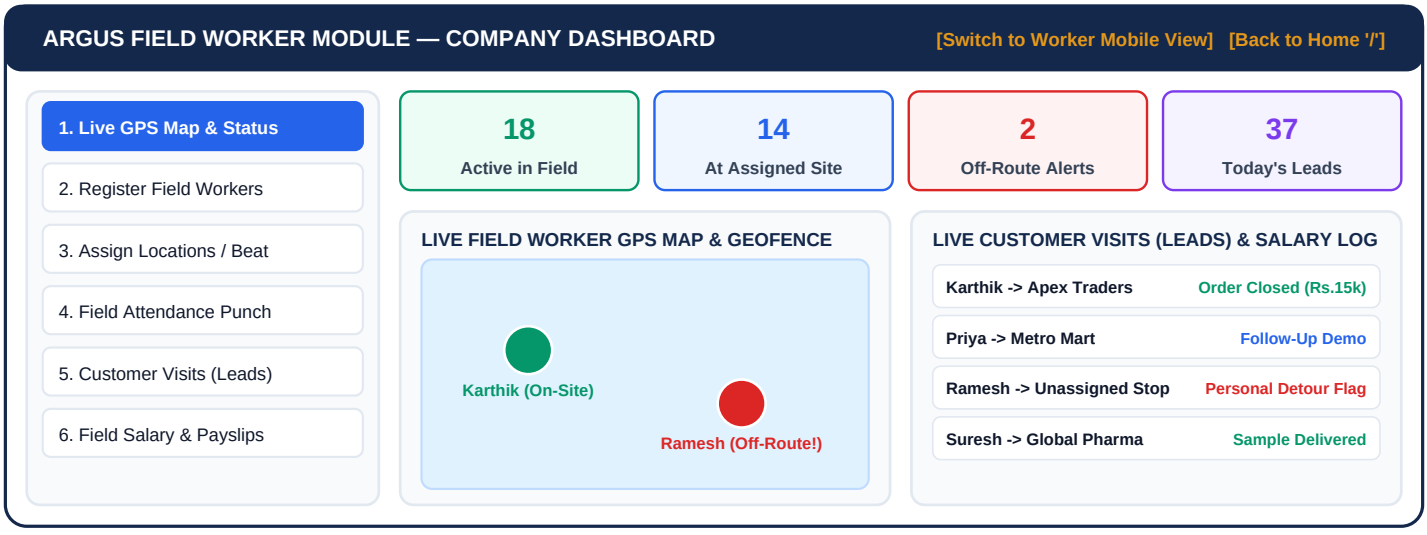
A major challenge for companies is knowing whether a field employee is genuinely visiting assigned clients or spending work hours on personal errands. Our **Smart Geofence & Route Verification Engine** solves this automatically in three ways:



Tracking Indicator	What Happens in Real Life	How the System Alerts the Company
GREEN: Verified On-Site	Worker arrives within the allowed radius (e.g., 150 meters) of the assigned customer location and checks in with live GPS & photo.	Marked as **'Verified Visit'**. Time spent and visit count are credited toward their daily target and salary.
AMBER: In-Transit / Delay	Worker is travelling between Assigned Client A and Assigned Client B, or is delayed in traffic.	Shows live moving pin on the map with distance remaining to the next assigned customer location.
RED: Off-Route / Personal Work	Worker goes far away from the assigned route (e.g., 3 km away), stays idle at an unassigned place, or tries to punch from an unauthorized area.	Flags an instant **'Off-Route / Unassigned Location Alert'** on the Manager Dashboard. Unverified personal stops can be excluded from paid hours.

5. Visual Preview of the Dedicated Field Worker Module Screen

When clicking **"FIELD WORKER MODULE"** on the home screen, authorized company managers see a unified command center combining live GPS pins, route compliance alerts, customer lead logs, and one-click payroll:



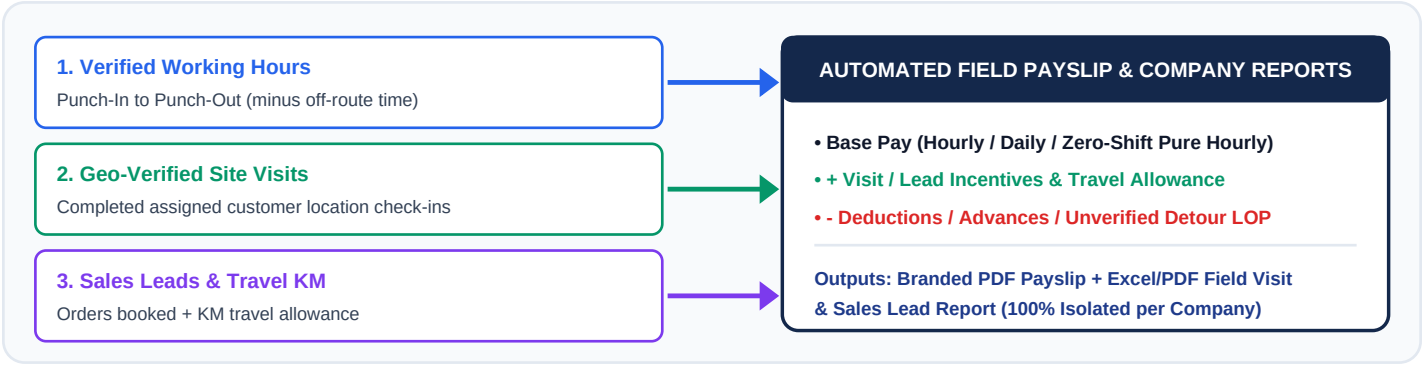
6. Complete Feature Summary Inside the Field Worker Module

Every registered company gets its own isolated Field Worker workspace with the following six integrated capabilities:

Module Section	Key Capabilities for the Company & Field Staff
1. Field Worker Registration	Register field workers with Face ID photo, mobile/email login, territory/zone, and flexible pay structure (**Hourly Rate**, **Daily Salary**, **Per-Visit Incentive**, or **Travel Allowance per km**). Respects company Active/Inactive quota.
2. Location & Task Assignment	Company manager assigns daily or weekly target locations (Customer Name, Address, Map Coordinates, Allowed Geofence Radius, and Task Purpose such as Product Demo, Sales Pitch, Collection, or Service).
3. Live Location Monitoring	Interactive live map showing where each field worker currently is, their breadcrumb travel path, total kilometers travelled, and automatic **On-Route vs. Personal Detour (Off-Route)** compliance status.
4. AI Face + GPS Attendance	Field workers punch in and punch out from their mobile browser using **2-Blink AI Face Liveness** + **Live GPS Address**. Prevents proxy punching or fake photo spoofing.
5. Customer Visiting (Lead CRM)	At each customer visit, the worker logs: **Customer/Shop Name**, **Contact Person & Phone**, **Product/Service Discussed**, **Lead Status** (Interested / Follow-Up / Order Booked / Not Interested), **Order Value**, and **Live Site Photo Proof**.
6. Field Salary & Reports	Automatically calculates monthly earnings based on verified field hours, completed customer visits, travel allowance, and sales incentives. Generates branded **PDF Payslips** and **Excel/PDF Field Activity & Lead Reports** per company.

7. How Field Visits & Attendance Convert into Salary Payslips

The diagram below shows how verified field attendance, customer visits, and sales leads automatically flow into the company's payroll and reporting engine:



CLIENT APPROVAL & SIGN-OFF

We have reviewed the visual workflow and feature scope for the **Field Worker Module** (Registration, Location Assignment, Live GPS & Personal-Detour Tracking, Face+GPS Attendance, Customer Visit/Lead Capture, and Field Salary/Payslip Reports) and approve proceeding with implementation.
